EXECUTIVE SUMMARY

Computer Science Sophomore at SASTRA University focused on **full-stack systems** and **developer tools**. Experienced in building **production web applications** used by 500+ users, including **document-processing pipelines** and **WebAssembly** based **browser OS simulations**.

EDUCATION

SASTRA Deemed To Be University (2024 - 2028)

(CGPA: 7.64)

Activities: Member at ByteClub (Hackathons), DSoC, Daksh Workshops

EXPERIENCE

Software Development Intern - @ For Real | <https://for-real.in>

Jan - Present 2026

- SDE Intern at 'For Real' - A Titan Capital (VC) Backed **D2C Startup** that provides an online **factory outlet** for **deadstock**.
- Worked with Medusa JS, Next JS, TailwindCSS, Framer Motion and MixPanel to help build the product.
- Displayed collaborative coding and design paradigms (GitHub, Figma, Linear) and clean code practices.

FEATURED PROJECTS

Nextar OS – Offline Web-Based Operating System Simulation | [Link](#)

(December 2024)

Technologies: Next JS, TailwindCSS, Framer Motion

- Built a fully offline, browser-based convergent (desktop+mobile) OS with 30+ built-in apps, a virtual file system, window manager, dock, multi-user roles, and a permission system - deployable as a web app or cross-platform Electron desktop client which also doubles as my personal portfolio website.
- Engineered a dual-theme design system with neumorphic glassmorphism and smart wallpaper color extraction, alongside in-browser Node.js and Python runtimes using WebContainers and Pyodide.
- Implemented WASM based Linux environment through CheerpX for a sandboxed linux environment.

SASTRACKER - Modern PyQ DB for College Students | [Link](#)

(November 2025)

Technologies: Next JS, PostgreSQL, Supabase, LLM APIs, FastAPI

- Built a system used by 500+ students to convert question paper PDFs into a structured, searchable database, handling multi-page, diagram questions and inconsistent formats.
- Implemented LLM-assisted extraction with fallbacks, fast search, AI-assisted solving, and community-contributed answers.
- Features Resume Hub which allows seniors to share resume, critique other resumes and guide juniors and features 'Diff Viewer' - a semantic difference analysis on two resumes.

CleanMyLinkedIn - LinkedIn Feed Cleaner | [Link](#)

(December 2025)

Technologies: HTML, CSS, JS, LLM APIs, Local Heuristics

- Built a Chrome extension that filters LinkedIn feed from low effort posts in real time using local heuristic scoring and optional LLM analysis based on text patterns, structure, and engagement signals.
- Implemented DOM-level analysis, stop word weighting, caching, and scroll aware processing for infinite feeds with zero backend and privacy first design.

SKILLS

GitHub: [Link](#)

Languages: JavaScript (ES6+), Python, Java, C/C++, HTML/CSS

Frameworks & Libraries: Next.js, React, FastAPI, Express, TailwindCSS, Framer Motion, GSAP, Medusa JS

Backend & Database: PostgreSQL, Supabase, Amazon S3, REST APIs, Firebase, OAuth 2.0

Tools & Platforms: Git, Docker, GCP, Linux, LLM APIs, Chrome Extensions, MixPanel

Systems & Architecture: Document Processing Pipelines, Virtual File Systems, Local Heuristics, Offline-first Design, PWAs
